PROFESSIONAL SUMMARY

Senior Full Stack Engineer with 6+ years of experience building scalable, high-performance web and mobile applications across fintech, e-commerce, and transactional platforms. Strong expertise in React.js, Next.js, React Native, TypeScript, Node.js (NestJS, Express), and modern full-stack architecture, with hands-on ownership of everything from database design to production payment integrations. First-Class graduate in Cyber Security Science, bringing a security-conscious, methodical approach to system design and code quality. Deep testing discipline (Jest, Playwright) and a track record of leading production migrations, mentoring engineers, and delivering commerce-critical flows — checkout, payments, dashboards, real-time data independently and reliably in remote, high-ownership environments.

CORE SKILLS

Frontend: React.js, Next.js (App Router), React Native, TypeScript, JavaScript (ES6+), HTML5, CSS3, Tailwind CSS, SCSS, Redux, Zustand, Context API, TanStack Query, SWR

Backend: Node.js, NestJS, Express, Prisma ORM, PostgreSQL, MongoDB, REST API design, GraphQL, JWT Auth + RBAC, OAuth2, Stripe (incl. idempotent webhooks), Redis / Upstash

Architecture: Microservices, NX & Turborepo monorepos, component-driven architecture, repository pattern, database design & indexing at scale

Testing & QA: Jest, React Testing Library, Playwright — unit, integration, and end-to-end coverage on production-critical flows

DevOps: Docker & Docker Compose, CI/CD (GitHub Actions), Git/GitHub (PR workflows, code review), Vercel, Netlify, AWS, GCP, DigitalOcean, Supabase

Security: Secure coding practices and system-reliability thinking from formal Cyber Security training; authentication/authorization design (JWT, OAuth2, RBAC)

SELECTED PROJECTS

Resilient Subscription Microservice — *Personal Project (NestJS, Prisma 7, PostgreSQL, Stripe)*

- Built a production-grade subscription microservice with Stripe integration, idempotent webhook processing, and fully transactional database writes for data consistency.
- Implemented JWT authentication, RBAC, and a clean Controller/Service/Repository architecture with zero business logic in controllers.
- Designed a PostgreSQL schema with foreign keys, unique constraints, and strategic indexing for performance at scale; containerized with Docker Compose including automated migrations and health checks.
- Wrote comprehensive unit tests with fully mocked dependencies — zero real database or API calls during test runs — and documented the API with Swagger.

GitHub: [Subscription Service Link](#)

Mercatura — Modular E-Commerce Platform — *Personal Project, In Progress (NX Monorepo)*

- Architecting a production-grade e-commerce platform using an NX monorepo for shared UI components and scalable frontend architecture.
- Building product discovery, cart, checkout, order lifecycle, and vendor dashboards with TypeScript-first design and TanStack Query for server-state management, targeting B2B2C use cases.

WORK EXPERIENCE

Full Stack Engineer — Inhouz Cloud (Contract)

Jun 2026 – Sep 2026

- Built customer-facing, personnel, and back-office applications on a proprietary low-code cloud platform for a data annotation company, including query optimization and access-control work on multi-million-record MongoDB collections.
- Diagnosed and fixed production data-integrity and performance issues across authentication, geolocation validation, and reporting modules, working directly with platform-native query/aggregation patterns.

Senior ICT Specialist & Full Stack Developer — Harvard Polytechnic, Ilorin

May 2024 – Feb 2026

- Led migration of the institution's public website from WordPress to a Next.js monorepo, improving performance, SEO, and maintainability.
- Designed and developed a transaction-driven academic management portal covering admissions, payments, and results management.
- Integrated Paystack payment gateway, improving payment success rates by 35% through precise handling of transactional edge cases.
- Implemented TanStack Query for server-state management, reducing redundant API calls and improving perceived performance by 40%.
- Enforced frontend best practices around component architecture, accessibility, and performance optimization; mentored junior developers and conducted code reviews.

Frontend Engineer (Contract) — Losode — Fashion E-Commerce Platform

Jun 2025 – Dec 2025

- Led migration of a production e-commerce frontend from Create React App to Next.js with TypeScript, improving routing, SEO, and application performance.
- Introduced Jest and Playwright for unit and end-to-end testing, establishing a scalable testing strategy across product, cart, and checkout flows.
- Refactored legacy components into typed, reusable components aligned with modern React architecture.

Full Stack Developer (Frontend-Heavy) — Binary Computers Nig. Ltd., Minna

Jul 2018 – Nov 2023

- Built and maintained MERN-based web applications across multiple business use cases over 6+ years.
- Implemented authentication and authorization systems, improving security compliance by 60%.

- Participated in monorepo setup and modularization, enabling code reuse across products; introduced unit and E2E testing, improving release stability.
- Applied performance optimization strategies, reducing page load times by 30%.

EDUCATION

B.Tech, Cyber Security Science – First Class Honours

Federal University of Technology, Minna – 2023

CERTIFICATIONS

- Apollo GraphQL Developer – Associate
- MongoDB University: Authentication & Authorization
- Junior Cyber Security Analyst Career Path (Cisco)
- UI/UX Design – Forma
- Project Management Essentials (PMEC™)

PUBLICATION & LEADERSHIP

- Published Paper: “Development of Hash-Based Multi-Factor Password Generating System” – FUOYE Journal of Engineering & Technology
- President, Do Deel (Mind the Gap) CDS – expanded membership from 2 to 50+, empowering 100+ youths
